Sir,

I hope all is well. I have reached out to OCSD regarding their facial recognition program. Many agencies in Orange County already have access through their commercial data subscription but haven't been using it since there are not a lot of local galleries available. This could easily be accomplished by getting OCSD on board, and for the agencies that already have a subscription with us (like you), there will be no or little additional cost. I have tried to reach out to OCSD and have not heard back. By any chance, is there a contact over there that you could introduce me to?

Greg

On Fri, May 10, 2019 at 3:27 PM <greg.mills@motorolasolutions.com> wrote:

Sir,

Thank you for meeting with us last week. I have attached the FaceSearch Onboarding document. Can you please forward to whoever is responsible for the booking photos or put me in contact with them? We can get you going on a 30 day trial. I have attached the recommended workflow for our program as well.

I would recommend you ping Steve Adair on pricing to bring in FaceSearch, but it should be fairly close to what you are paying now.

Thank you!

Greg Mills

Subject: Re: Data Export

Mei,

Understood; thanks for confirming my suspicions. As suggested, we will only import a photo if its filename matches up to a row in the Excel file based on the "name_id" column.

That should be all we need for now - thanks for your help!

Best regards,

Ben Ha

On Tue, Mar 12, 2019 at 3:25 PM Mei Lew <mlew@cityofirvine.org> wrote:

Hi Ben,

I believe your assessment is correct. I was hoping I can locate the job that converts the file to JPG.

Do you mean name_id < 3376 not found from the excel file?

The Name.Zip is all photos from our RMS(iLeads System, not just photos from Booking). You should only extract if there is a match (name_id) from both files.

There maybe rows from the excel file don't have a name_id.0011 (JPG). It's because some of the inmate maybe a Sally Port booking.. or the Camera as down and Custody Officer was unable to capture the photos.. the # should be very low..

Thanks,

Mei

Cc: Mark Anderson; William Hillyard; Jade Mazzio; Tom Avery

Subject: Re: Data Export

Mei,

It appears that the files ending with ".0011" and similar numbered file extensions actually are JPEG files (just with a renamed file extension). So we should be okay to use these photos.

However, before we can proceed with the import, we'll need you to confirm that the photos that do not have a corresponding row in the Excel file (based on "name_id") can be excluded from the import process. (All the filenames that have a number lower than "3376" are not referenced in the Excel file.)

Subject: Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Subject: Data Export

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

Thank you,

Hi, Sorry I missed your calls today. The meeting should be about an hour and the rep is out all next week, also the items we are set to discuss don't really impact general investigations all that much. Their facial recognition software will, but we are also going to discuss fixed, trailer, and vehicle ALPRs and packages they offer to bundle all of that stuff together.

Subject: Meeting with Vigilant Ref Facial Rec and APLRs

All,

Next Thursday April 18, at 3pm Greg Mills our account rep from Vigilant Technologies will be here to discuss their facial recognition software, ALPR options, and some of Vigilant's other programs that bundle together packages of fixed ALPRs, vehicle ALPRs, and facial recognition software. If you would like to attend, the meeting will be in the Investigations conference room.

Best regards,

William Hillyard | Detective | Irvine Police Department

Bo,

Sorry I didn't email you sooner, but Vigilant will be here today at 2pm to discuss LPRs and their facial recognition software packages. We will be meeting in the investigation conference room. You are more than welcome to attend if you're available.

Thanks,

William Hillyard | Detective | Irvine Police Department

Sir,

Thank you for meeting with us last week. I have attached the FaceSearch Onboarding document. Can you please forward to whoever is responsible for the booking photos or put me in contact with them? We can get you going on a 30 day trial. I have attached the recommended workflow for our program as well.

I would recommend you ping Steve Adair on pricing to bring in FaceSearch, but it should be fairly close to what you are paying now.

Thank you!

Greg Mills

Mark,

My name is Bill Hillyard and I am a Detective with the Irvine Police Department. I received your contact information from Detective Burton from the Huntington Beach Police Department. I am assigned as our department's "Tech" Detective which means I am responsible for cell phone forensic analysis using Graykey, Cellebrite, Axiom, and a few other tools, as well as handling our ALPR systems, GPS Car Trackers, Covert Cameras, Drones, and Pole Cameras. I have been evaluating different types of facial recognition software over the last few months, and truly believe that facial recognition is an incredible tool with which to generate leads for our investigators. I've been demoing software from Veritone Inc and Vigilant, but one of our Detectives received a lead on a case from Det. Burton from Huntington Beach who ID'd the suspect through LACRIS. I knew that LA County had their own homegrown facial recognition system but didn't know that anyone outside LA County could or did have access to it.

Whenever you have some free time I would appreciate a chance to talk with you and see if it would be possible to get access to LACRIS for a few of us here at the Irvine Police Department. I would also be interested in your thoughts on any other facial recognition software providers you have seen or may have dealt with. My direct line is [REDACTED]

Thank you,

William Hillyard | Detective | Irvine Police Department

Bill,

I spoke to our DataWorks Plus rep, Todd, and gave him a brief rundown of our earlier conversation. I mentioned to him the size of your records and desire to use Mobile ID devices and a facial recognition system and I'm sure he will be able to handle all of your questions and have a few suggestions. I still plan to have that call with OCS in a couple of weeks and will keep you posted. Todd's contact information is below.

Dear Lieutenant Anderson,

Greetings, I'm Jack, a Business Development Manager at Suspect Technologies located in Boston, MA. We are a leading provider of video analytics software for the **law enforcement** market. Our AI-powered software includes **Automated Video and Audio Redaction, Facial Recognition** with the capability to search your records management database and **Video Conversion**.

Our automated redaction software saves money and reduces time to redact videos by 10x. Furthermore, the application allows investigators to review the video frame-by-frame and add text notation to isolate critical information for quickly solving crimes and presenting clear evidence to the judicial system.

Our nationwide deployments include NYPD, Miami PD, Phoenix PD, and Oakland PD. One of our investors, Mark Cuban, has even deployed our video analytics software in the Dallas Mavericks' locker room.

If our solutions interest the Irvine Police Department, would you be available this week to discuss more and demo our software?

Kind Regards,

Jack Ahmadi

Manager of Business Development

Hi Mei,

As soon as we can get the data export done the better. I have copied Tom Avery who is our point of contact with the vendor, Veritone, on this email.

Tom, Mei is the person with our department who can facilitate the data export and is most knowledgeable in how our data is stored and formatted. Could you put her in touch with a person at Veritone in case there are any specific questions about the data export, format etc.

Please let me know what I can do to assist in the process.

Thank you,

Bill Hillyard

Subject: Data Export

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of

booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

Thank you,

Hello Tom,

Please let us know how would you like for the data being turn over to you.

Do you have a SFTP site we can have the files transfer over?

Below is the data layout and the photos are being sent as a separate fil and they are with jpg extension.

The way you link the photo to the book is using the name_id .. for example if the name_id is 12345 , then the photo is label as 12345.jpg

Thank you!

Hello Tom,

Please let us know how would you like for the data being turn over to you.

Do you have a SFTP site we can have the files transfer over?

Below is the data layout and the photos are being sent as a separate fil and they are with jpg extension.

The way you link the photo to the book is using the name_id .. for example if the name_id is 12345 , then the photo is label as 12345.jpg

Thank you!

Mei

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

Thank you,

Mei,

Understood. Alternatively, if you have your own SFTP server or method of secure file transfer, please provide us with the necessary details and we can pull the data down from there.

Please let me know if you're having trouble with getting S3 to work and I would be happy to help.

Subject Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Hi Ben,

The updated file has been uploaded.

It looks like there was issue on the export – see file name just got uploaded (highlighted)
It should be good now.

You will just use the ipg extension on photo reference back to the arrested.

Thanks,
Mei

Hi Ben,

The updated file has been uploaded.

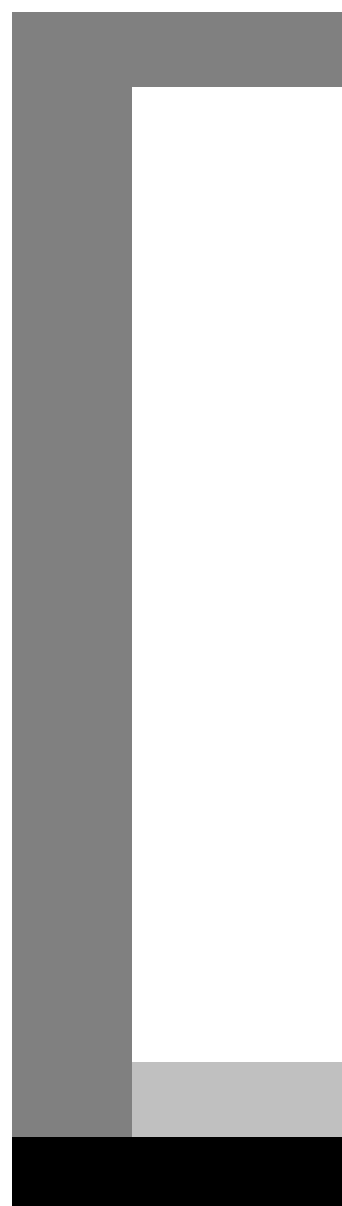

It looks like there was issue on the export – see file name just got uploaded (highlighted)

It should be good now.

You will just use the ipg extension on photo reference back to the arrested.

Thanks,

Mei

Subject: Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Mei,

Understood. Alternatively, if you have your own SFTP server or method of secure file transfer, please provide us with the necessary details and we can pull the data down from there.

Please let me know if you're having trouble with getting S3 to work and I would be happy to help.

Hi Mei,

We actually utilize Amazon S3 for secure file transfers. Below is the information for the Amazon S3 bucket to connect to:

Network Security

You'll need to use a file transfer client that supports uploading to Amazon S3, such as [Cyberduck](#). Please let me know when the data has been uploaded and I will review it.

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

Thank you,

Hi Ben,

That's correct.. 41,281 rows and the first row is the header.

That's correct you will only need to keep the extension with ipg for the photos.

Thanks,
Mei

Mei,

I've reviewed the updated file:

- There are 41,281 booking records in the "Irvinebooking as of March 11 2019.xls" file. Can you please confirm this matches up to what you have on your side?
- Regarding the booking photos, we are going to EXCLUDE the following files from the import process on our side; please confirm this is correct:

- **.TMB File Extension** - 108 files
- **.0011 File Extension** - 85 files
- COPYOF~1.jpg
- COPYOF~2.jpg
- COPYOF~3.jpg
- COPYOF~4.jpg

Please confirm the above points before we proceed with the import process - thanks.

Best regards,

Ben Ha

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

Subject: Data Export

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

Mei,

Should the photos that do not have a corresponding row in the Excel file (based on "name_id") be excluded from the import process on our side? It appears that all the JPEG files with a filename smaller than "3376" are missing from the Excel file.

Please advise - thanks.

Mei,

I've reviewed the updated file:

- There are 41,281 booking records in the "Irvinebooking as of March 11 2019.xls" file. Can you please confirm this matches up to what you have on your side?
- Regarding the booking photos, we are going to EXCLUDE the following files from the import process on our side; please confirm this is correct:
 - **TMB File Extension** - 108 files
 - **.0011 File Extension** - 85 files
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg

Please confirm the above points before we proceed with the import process - thanks.

Subject: Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Hi Ben,

There should be total of 2 files you needed.

Name.zip and the below

There are 41,281 booking records in the "Irvinebooking as of March 11 2019.xls" file.

Yes you would have to only link only those with extension of JPG - name_id.JPG to the booking

metadata file? you would have to extract the information from the above xls file to get the details. There is no separate Meta Data file ...

Thanks,

Mei

Mei,

I've reviewed the updated file:

- There are 41,281 booking records in the "Irvinebooking as of March 11 2019.xls" file. Can you please confirm this matches up to what you have on your side?
- Regarding the booking photos, we are going to EXCLUDE the following files from the import process on our side; please confirm this is correct:

- o. **TMB File Extension** - 108 files
- o. **.0011 File Extension** - 85 files
- o COPYOF~1.jpg
- o COPYOF~2.jpg
- o COPYOF~3.jpg
- o COPYOF~4.jpg

Please confirm the above points before we proceed with the import process - thanks.

Best regards,

Ben Ha

Subject: Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Hi Mei,

We actually utilize Amazon S3 for secure file transfers. Below is the information for the Amazon S3 bucket to connect to:

Network Security

You'll need to use a file transfer client that supports uploading to Amazon S3, such as [Cyberduck](#). Please let me know when the data has been uploaded and I will review it.

Best regards,

Hi Mei,

We recently signed an agreement to do a three month trial with a company named Veritone to evaluate their facial recognition software. Veritone's software can compare a photo of an unknown suspect to our database of known offenders from our database of booking photos. I have attached the instruction from Veritone regarding what is needed for the data export. Could you please review this and let me know if this makes sense and if we can accomplish this data export. If necessary I can have Veritone's tech support people provide assistance with this data export.

Please let me know if there is any additional information I can provide.

It looks like there was issue on the export – see file name just got uploaded (highlighted)
It should be good now.

You will just use the ipg extension on photo reference back to the arrested.

Thanks,
Mei

Subject: Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Best regards,

Ben Ha

Mei,

It appears that the files ending with ".0011" and similar numbered file extensions actually are JPEG files (just with a renamed file extension). So we should be okay to use these photos.

However, before we can proceed with the import, we'll need you to confirm that the photos that do not have a corresponding row in the Excel file (based on "name_id") can be excluded from the import process. (All the filenames that have a number lower than "3376" are not referenced in the Excel file.)

Hi Ben,

I believe your assessment is correct. I was hoping I can locate the job that converts the file to JPG.

Do you mean name_id < 3376 not found from the excel file?

The Name.Zip is all photos from our RMS(iLeads System, not just photos from Booking). You should only extract if there is a match (name_id) from both files.

There maybe rows from the excel file don't have a name_id.0011 (JPG). It's because some of the inmate maybe a Sally Port booking.. or the Camera as down and Custody Officer was unable to capture the photos.. the # should be very low..

Thanks,

Mei

Subject: Re: Data Export

Mei,

I've reviewed the updated file:

- There are 41,281 booking records in the "Irvinebooking as of March 11 2019.xls" file. Can you please confirm this matches up to what you have on your side?
- Regarding the booking photos, we are going to EXCLUDE the following files from the import process on our side; please confirm this is correct:
 - **TMB File Extension** - 108 files
 - **.0011 File Extension** - 85 files
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg

Please confirm the above points before we proceed with the import process - thanks.

Best regards,

Ben Ha

Subject: Re: Data Export

Hi Mei,

I've done a preliminary review of the files that were sent over and noticed the following:

- There are 412,281 booking records in the "IrvineBooking as of 20190308_v1.txt" file. Can you please confirm this is correct?
- Regarding the booking photos:
 - There are a total of 35,080 files, which are divided into the following file extensions:
 - **.JPG** - 34,887 files
 - **.TMB** - 108 files
 - **.0011** - 85 files
 - What are the the ".TMB" and ".0011" files, and do they need to be included as part of the import process on our side?
 - The following files appear to be copies of other files; can you please confirm they can be EXCLUDED from the import process on our side? If not, then I'll need to know the proper "name_id" value for each of them:
 - COPYOF~1.jpg
 - COPYOF~2.jpg
 - COPYOF~3.jpg
 - COPYOF~4.jpg
 - I noticed there is only one photo of each individual, even in the case of there being multiple bookings. In these cases, are we only importing one photo for each individual?

Please let me know your thoughts - thanks.

Best regards,

Ben Ha

Hi Ben,

I believe your assessment is correct. I was hoping I can locate the job that converts the file to JPG.

Do you mean name_id < 3376 not found from the excel file?

The Name.Zip is all photos from our RMS(iLeads System, not just photos from Booking). You should only extract if there is a match (name_id) from both files.

There maybe rows from the excel file don't have a name_id.0011 (JPG). It's because some of the inmate maybe a Sally Port booking.. or the Camera as down and Custody Officer was unable to capture the photos.. the # should be very low..

Thanks,

Mei

Subject: Re: Data Export

Mei,

It appears that the files ending with ".0011" and similar numbered file extensions actually are JPEG files (just with a renamed file extension). So we should be okay to use these photos. However, before we can proceed with the import, we'll need you to confirm that the photos that do not have a corresponding row in the Excel file (based on "name_id") can be excluded from the import process. (All the filenames that have a number lower than "3376" are not referenced in the Excel file.)

✘ image001.png (5 Kb)

All,

The Irvine Police Department has just begun a 90 day pilot program to evaluate facial recognition software being developed by Veritone Inc. which is a company based in Costa Mesa. Veritone's software is web-based and is capable of comparing a facial image of an unknown suspect from a still photo or video, to a library of known suspect photos. The library of known suspect photos Veritone uses for comparison is comprised of the booking photos from Irvine PD, Anaheim PD, and the Orange County Sheriff's Department, which in total is nearly 800,000 individual suspect records.

I will provide a demonstration of the software at the next IM, but in the meantime if you have any photos or surveillance video of any unknown suspect(s) or any old cases that had good photos or video, and would like assistance trying to ID the person(s) using this software please contact me. For the 90 day trial period CAU, Mudd, Kaitlyn, and I will have active license to access the software.

Please contact me if you have any questions,

All,

Sorry for the late notice but I just received a call from Greg Mills our Vigilant Rep asking to reschedule our meeting today due to some unforeseen circumstances. The new meeting time will be Tuesday April 30, at 2pm in the Investigations Conference Room.

Again, I apologize for the last minute change.

Thank you,

William Hillyard | Detective | Irvine Police Department

Subject: Meeting with Vigilant Ref Facial Rec and APLRs

All,

Next Thursday April 18, at 3pm Greg Mills our account rep from Vigilant Technologies will be here to discuss their facial recognition software, ALPR options, and some of Vigilant's other programs that bundle together packages of fixed ALPRs, vehicle ALPRs, and facial recognition software. If you would like to attend, the meeting will be in the Investigations conference room.

Best regards,

William Hillyard | Detective | Irvine Police Department
